

## Zenith Project

**How do you ignite your passion and elevate your skills and experiences to create your ultimate and most successful Freestyle project?**

The purpose of the Senior Zenith Project is to ignite your passion and elevate your skills and experiences to create your ultimate and most successful Freestyle project!

*All of our 21st Century goals apply to this project; however, for this Zenith Project, a significant goal is for you to develop **Self Direction** – the ability to set goals related to learning, plan for the achievement of those goals, independently manage time and effort, and independently assess the quality of learning and any products that result from the learning experience.*

### Zenith Project Description / Requirements:

1. What is your project? Why is this particular project a passion for you? Discuss the final media form as well as the content you envision.

➤ My Zenith Project is a music video, more specifically a rap battle between two teachers. I was hoping to do it between Mr. Flo and Mr. Greco, but depending on their availability and if they would like to, those teachers may change. Music has been the biggest activity I have taken part of outside of freestyle.

2. How is this project a new challenge (a risk) for you? If you are in a group, define each of your roles and explain how each role will be a new challenge/risk for you. Also, how will you hold one another accountable for your roles? *Note: To encourage and reward you for your risk taking, your process will be worth more of your overall grade than the completed project.*

➤ This Zenith project is a new challenge for me because I have never really produced music, I have never sat down and written melodic material or an original song. It is a risk because I have to do a lot of research on the use of melody in hip hop, how to use it effectively as well as having lyrics that go well with the beat.

3. How will you incorporate your production class skills (new or existing) into your Project?

➤ For my Production Class Film, I will do pre-production(writing the lyrics planning out the music video), Production(shooting the music video), post production(the video editing and sound mixing).
